DETAILED ACTION

Allowable Subject Matter

Claims 1-6 and 8-15 are allowed.

The following is an examiner's statement of reasons for allowance: the prior art of record neither teaches nor reasonably suggests the combined method steps of:

- 1) preparing two light beams,
- 2) introducing them into a sample to be measured in anisotropy,
- 3) rotating the plane of polarization of one of the beams and
- 4) superimposing them for analysis

as claimed in claims 1 and 8.

Claims 2-6 and 9-15 are allowed by virtue of their dependency.

Gutierrez (US 5,706,084) prepares two beams (one beam with orthogonal polarization states) and introduces it into a sample to be measured in anisotropy.

Gutierrez does not rotate the polarization state of one of the beams, and then recombine them for analysis. Instead, a prior art analyzer is used.

Yeh (EP 0 209 721) performs the first two steps simultaneously in the laser cavity, and therefore does not teach them individually. Yeh does, however, take two beams (one beam of orthogonal polarization states) from a sample to be measured in anisotropy, rotate the polarization state of one of the beams, and then superimpose them for analysis with an equal-path Mach-Zehnder arrangement.

Application/Control Number: 09/903,999

Art Unit: 2882

However, there isn't any reasonable suggestion to replace Gutierrez's analyzer

with Yeh's equal-path Mach-Zehnder arrangement in either of the references.

Any comments considered necessary by applicant must be submitted no later than

the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on

Statement of Reasons for Allowance."
